Working Prototype Known Problems Report

1. If the page is not crawled(not in database), the extension shows 0 scores and incorrect last updated.
2. The extension runs on all websites, it should only be restricted to Wikipedia pages.
3. The way the algorithms are designed, the extension doesn't calculate scores immediately, the page needs to be crawled and processed before it can be shown in the extension.
4. Runner occasionally fails on certain wiki pages as they have extra data in them ("donate button")
5. The function "getOverallTrust" in Reputation Engine has some edge cases that have not been handled yet.
6. The function "combineTrustWithText" in Reputation Engine has some edge cases that have not been handled yet.
7. The function "getTrustValue" in Reputation Engine has some edge cases that have not been handled yet.
8.
