Done Criteria

1. Variables, functions and classes need descriptive and unambiguous names.
2. Feature/code must be peer-reviewed by another member.
3. Feature/code needs to be manually tested for functionality if unit tests are not available
4. Feature must pass unit tests if available.
5. All functions and classes need documentation (e.g. Python requires docstring on methods)
6. Code needs to be self-explanatory, otherwise it requires comments.
7. The code must meet functional requirements and merge to master after approval.
